

BIG ANNOUNCE · 10-SLIDE CAROUSEL

Civitas × Nillion.

Privacy at the storage layer. The piece crypto payroll
has been missing.

WHAT NILLION IS

A secret-share network.
MPC + TEE compute.
Blind queries on private data.

The full privacy stack at the data layer.

WHY SECRET-SHARING MATTERS FOR PAYROLL

No single node sees the salary.

Not Nillion.

Not Civitas.

Not a single node operator.

Subpoena one node → ciphertext only.

NILDB

Secret-shared document store.

Field-level encryption via %allot.

The org holds the capability key. We don't. Nobody does.

NILCC

Attested TEE compute.

Run code on private data without seeing it.

SEV-SNP measurement. Ed25519-signed outputs.
Verifiable from the repo.

THE CIVITAS INTEGRATION

4 nilDB collections per org.

- employees · encrypted PII + comp
- payrolls · run templates
- runs · executed batches w/ commitments
- vouchers · encrypted receipts per disbursement

WHAT'S ENCRYPTED UNDER %ALLOT

- pay rate
- paystub history
- tax IDs
- jurisdiction attestations
- comp negotiation notes

WHO CAN DECRYPT

Org capability key	everything
Auditor scoped key	permitted window
Civitas	nothing
Nillion	nothing

BIGGER THAN CIVITAS

Every private fintech needs this primitive.

Private credit · private trading · private grants · private payroll.

Storage privacy is the layer beneath all of them.

BUILD WITH US

Nillion Nucleus is open.

Civitas + Nillion proves the model.
